

# QR CODES NOW ON ALL OUR MOTORS

Lift Tech Marine came out with QR codes. All newer motors now come with QR codes on the can of the motor by the gear head. The reason we did this is to make it easier for the customers to access the Owner's Manuals whenever they need to. By simply pointing your camera at the QR code it will open a yellow link. As soon as you touch the yellow link it will bring you right to the owner's manual and warranty for that motor. A person then has an option of saving the pdf or printing it.

We felt like the owner's manuals we used to zip tie to the motor would not get to the customers. They would tear off during installation or be left in the box if a dealer installed them and thrown away.
